

ACTA DERMATO- VENEREOLOGICA

NEWSLETTER (November 2021)

Editors' Choice in November 2021 in Acta Dermato-Venereologica:

Biogeographical Landscape of the Human Face Skin Microbiome Viewed in High Definition

Michael Brandwein, Garold Fuks, Avigail Israel, Emilia Hodak, Fareed Sabbah, Doron Steinberg, Zvi Bentwich, Noam Shental, Shiri Meshner

Michael Brandwein

Comments by the authors:

Human microbiome studies have taken large strides over the past decade or so, yet the skin microbiome and its vast potential has not received the attention it deserves. The skin is our largest organ and is the focal point of dermatology and cosmetics. By performing this study, we demonstrate that much is still to be explored with regards to the skin microbiome, specifically in terms of its distribution on healthy individuals. Our paper takes the field of skin microbiome profiling one step further, and it is our hope that future studies will continue where we left off.

ActaDV on a new publication platform

We are excited to announce that Acta Dermato-Venereologica (ActaDV) has just transitioned publication system from our own internally developed system to a publicly supported system called Open Journal Systems (OJS).

The new publication platform affords ActaDV the opportunity to improve the quality and speed of our publication process as well as expand the reach of its published contents. Advantages that this change in system can offer ActaDV and its stakeholders include:

- Modernization and conformation to industry standards – OJS was designed specifically for open access, peer-reviewed publishing and supports for example JATS XML standardization, which has become the standard ‘model’ for journal articles. JATS XML is used in most scholarly communities today (including public archives like PubMed Central amongst other indexes and hosts).
- Increased reach of journal contents – by offering a platform that is optimized for content discovery across search engines such as Google, Google Scholar, and Bing, and that provides comprehensive indexing. In short, contents on the new platform will be machine-readable and searchable meaning they can more easily be accessed, read and indexed.
- Increased efficiency and transparency in the publication process - saving time and energy for both authors and the editorial team while maintaining integrity throughout the editorial process. By getting an end-to-end journal publishing and management system, all steps of the publication can be handled in the same system and a lot of what used to be manual work will now be automated. Hence the new system not only provides the technical infrastructure for the presentation of contents, but also the complete editorial-management workflow (including submission, peer-review, and indexing).
- Increased quality and security – by streamlining the record-keeping process, ActaDV can now offer an even more secure environment for archiving and stewardship of scholarly content.
- Continuous development – with more than 10,000 journals worldwide OJS is continuously being developed with new features being added as scholarly communication is developed.
- Improved user experience – many ActaDV authors already have an account with OJS and are familiar with the submission process.
