Fig. S1. Proportions of patients who achieved both EASI-50 and change in WSI-NRS ≥ 4 (FAS and IGA) >1 subgroup.

^a $p < 0.0001$ vs placebo (for IGA >1 subgroup).

EASI-50: 50% improvement in Eczema Area and Severity Index; FAS: full analysis set; IGA: Investigator's Global Assessment; q4w, every 4 weeks; TCS: topical corticosteroids; WSI-NRS: Worst Scratch/Itch Numerical Rating Scale. * $p < 0.01$ vs placebo, ** $p < 0.0001$ vs placebo (for FAS).
