Supplementary material to article by J. S. Blythe et al. "Nocebo Effects on Cowhage-evoked Itch: A Randomized Controlled Trial of Classical Conditioning and Observational Learning"

Table SIII. Pearson's correlations between psychological factors and classically conditioned nocebo effects (n=19)

Measure	Mean	SD	Range	Correlation with nocebo effect on itch*
STAI state	37.9	9.0	20-57	-0.01
PSS	18.5	6.9	5-31	-0.21
PANAS (positive)	28.4	6.3	16-41	-0.37
PANAS (negative)	13.9	4.1	10-25	0.10

STAI: State-Trait Anxiety Inventory; PSS: Perceived Stress Scale; PANAS: Positive and Negative Affect Schedule; SD: standard deviation. *No significant correlations (all *p* > 0.05).
