Comments by the authors:

We performed this study as treatment of psoriasis with biologics is often based on short-term response criteria, but patients are often treated long-term, and knowledge about long-term outcome of these response criteria is limited. We found that response early in the treatment predicted risk of drug discontinuation and risk of disease flares, i.e. a low PASI in the first six months is associated with lower risk of disease discontinuation and flares. We feel this paper is important as it provides evidence for guidelines in treatment of psoriasis with biologics. [Read more](#)

Medical Journals Sweden

Since almost 30 years, *Acta Dermato-Venereologica* (ActaDV) has been successfully collaborating with the *Journal of Rehabilitation Medicine*, by sharing office and employment responsibility for the editorial staff members. Since January 2021 this joint editorial office has been turned into a separate publishing company, *Medical Journals Sweden AB*. The organization thereby constitutes a more robust basis for staff employment as well as for future investment in equipment and technologies. The editorial staff as well as the domain name *medicaljournals.se* and the non-profit ideology remain unchanged however. Hence our skilled Senior Editorial Assistant, *Anna-Maria Andersson* who has been with us since 1994, will maintain the responsibility for the entire publication process for ActaDV, and will thus remain your contact person also in the future. The Editorial Manager and CEO is now *Ms Therese Granlund*. *Mrs Agneta Andersson* is the Chairperson of the company's board, which also consists of two academic persons from each of the two owning organizations.
