

Fig. S3. Transepidermal water-loss (TEWL) and surface pH during a 2-week restitution period after a complete stripping of *stratum corneum* in 4 healthy controls at day 0. Mean values are expressed as percentage of the immediate change of TEWL and pH after stripping (absolute mean values before/after stripping are shown together with symbol explanations). (Data are recalculated from original values presented in Fig. 3 of ref. (28) with permission).
