Supplementary material to article by M. Sánchez-Díaz et al. "Tofacitinib for Treatment of Alopecia Areata: Real-world Evidence and Factors Associated with Therapeutic Response"

\*MANOVA test was significant for the overall evolution of SALT scores over time (p=0.02). \*\* All values were significantly different from baseline (p<0.01)

Fig. S1. Stratified analyses for latency time for evolution time of the disease, sex, oral minoxidil co-treatment and age of onset. No differences were found between groups over the evolution of the treatment (p > 0.50). SD: standard deviation; MANOVA: multivariate analysis of variance; SALT: Severity of Alopecia Tool.
