Supplementary material to article by M. E. van Muijen et al. "Direct Comparison of Real-world Effectiveness of Biologics for Psoriasis using Absolute and Relative Psoriasis Area and Severity Index Scores in a Prospective Multicentre Cohort"

Fig. S1. Mean Psoriasis Area and Severity Index (PASI) values per biologic from baseline until 1 year of treatment, uncorrected for confounders.
Fig. S2. One-year PASI75 percentages based on the mixed logistic regression model, corrected for baseline Psoriasis Area and Severity Index (PASI), body weight and biologic naïvety. Visualizations were made for patients with average characteristics (baseline PASI 12.0, body weight 90 kg), and split for biologic-naïve and non-naïve treatment episodes (TEs).
