1

Supplementary Tables have been published as submitted, and have not been copyedited, typeset or checked for scientific content by Acta Dermato-Venereologica

| | | Histological confirmation or clinical and/or radiological follow-up | | | | | |
|------------------------------|------------|--|--|--|--|--|--|
| | | Presence of metastasis | Absence of metastasis | | | | |
| Image- guided biopsies | IGB (+) | with a diagnosis of melanoma metastasis confirmed by histopathology (complete lymph node dissection, partial or complete excision) or clinical and/or radiological follow-up for a minimum of 4 months. | with a diagnosis of melanoma metastasis negated by histopathology (benign lesion, malignancy other than melanoma) or clinical and/or radiological follow-up for a minimum of 4 months. | | | | |
| | IGB (-) | with a diagnosis of benign, non- atypical lesion, but with posterior detection of metastatic disease by histopathology (complete lymph node dissection, partial or complete excision, SLNB) or radiological exploration confirmed during a minimum follow-up time of 4 months. | with a diagnosis of benign, non-atypical lesion confirmed by histopathology (complete lymph node dissection, partial or complete excision, SLNB) and/or radiological follow-up for a minimum of 4 months. | | | | |

| Table S | I. Test | definitions | for true-i | positive. | true-negat | tive, false- | positive. | and false- | negative | results |
|----------|---------|-------------|------------|-----------|------------|--------------|-----------|------------|----------|---------|
| I abit D | L. ICSU | ucinitions | ioi tiut- | JUSILIYC, | uuuuuuuuu | uve, laise- | positive, | and faist- | negative | results |

Abbreviations: IGB, image-guided biopsy; SLNB, sentinel lymph node biopsy.

Serra-Garcia et al. 2 **Table SII. Characteristics of image-guided biopsies falsely diagnosed as melanoma (false-positives)**

| Case | Age at | Primary | IGB tissue type, | IGB | IGB findings | Histological/radiological | Follow-up |
|------|----------|-------------------|------------------|-----------|-------------------|------------------------------------|-----------------------------|
| | IGB, sex | melanoma | location | technique | | confirmation | |
| | | subtype, location | | | | | |
| 1 | 39, M | Acral, finger | Lymph nodes, | US-FNAC | Scarce atypical | Complete lymph node dissection. | 8 years, 9 months. No |
| | | | axillary | | cells, compatible | No metastasis in 22 lymph nodes | evidence of disease |
| | | | | | with melanoma | identified, no evidence of disease | |
| | | | | | metastasis, S- | in subsequent ultrasound. | |
| | | | | | 100 positive | No inflammatory or regressive | |
| | | | | | | changes reported. | |
| 2 | 64, M | Superficial | Lymph nodes, | US-FNAC | Malignant cells | Complete lymph node dissection. | 4 years, 3 months. 1 year |
| | | spreading, lower | inguinal | | indicative of | No metastasis in 13 lymph nodes | nivolumab treatment. No |
| | | limbs | | | melanoma | identified. Extensive cicatricial | evidence of disease |
| | | | | | metastasis | changes associated with | |
| | | | | | | granulomatous reaction to a | |
| | | | | | | foreign body, focally abscesified | |
| 3 | 74, M | Superficial | Lymph nodes, | US-FNAC | Melanoma | Complete lymph node dissection. | 11 months. Treatment |
| | | spreading, head | cervical | | metastases with | Absence of metastasis in 9 | initiated during clinical |
| | | and neck | | | abundant | cervical lymph nodes identified. | trial, progression 5 months |
| | | | | | necrosis, | No inflammatory or regressive | after IGB with suprarrenal |
| | | | | | macroscopically | changes reported. | and gallbladder metastasis. |
| | | | | | dark liquid | | |
| | | | | | | | |

| - | | | | Serra-G | arcía et al. | 3 | |
|---|-------|-----------------|--------------|---------|-------------------|-------------------------------------|------------------------------|
| 4 | 49, F | Nodular, trunk | Subcutaneous | CT-FNAC | Scarce atypical | Mass excision. Fibro-histiocitary | 2 years, 9 months. The mass |
| | | | | | cells, suspicious | proliferation proliferant fasciitis | was finally diagnosed as a |
| | | | | | of melanoma | type. Adjacent foreign body | high-grade fusiform |
| | | | | | metastasis | reaction. | sarcoma, resistant to |
| | | | | | | | surgery, chemotherapy and |
| | | | | | | | radiotherapy. |
| 5 | 69, M | Superficial | Lymph nodes, | US-FNAC | Melanoma | Complete lymph node dissection. | 12 years, 3 months. No |
| | | spreading, head | cervical | | metastasis | No metastasis in 21 cervical | evidence of disease |
| | | and neck | | | | lymph nodes identified. | |
| | | | | | | No inflammatory or regressive | |
| | | | | | | changes reported. | |
| 6 | 28, M | Superficial | Lymph nodes, | US-FNAC | Malignant cells | Radiological follow-up without | 7 years, 10 months. Relapse |
| | | spreading, head | cervical | | indicative of | evidence of metastasis. | 8 years after IGB with |
| | | and neck | | | melanoma | | disseminated metastasis |
| | | | | | metastasis | | (lung, bone). Clinical trial |
| | | | | | | | and subsequent treatment |
| | | | | | | | with pembrolizumab and |
| | | | | | | | bone radiotherapy initiated. |
| 1 | | 1 | | | | | |

Abbreviations: M, male; F, female; IGB, image-guided biopsy; US-FNAC, ultrasound guided fine needle aspiration cytology; CT-FNAC, computerized tomography guided fine needle aspiration biopsy.

| IGB characteristics | False-negative, n | Second IGB, n (%) | Inconclusive, n (%) | |
|----------------------------|-------------------|-------------------|---------------------|--|
| | (%) | | | |
| Total | 32 | 19 | 49 | |
| Moment of IGB | | | | |
| Staging | 8 (25.0%) | 3 (15.8%) | 9 (18.0%) | |
| Follow-up | 24 (75.0%) | 16 (84.2%) | 41 (82.0%) | |
| IGB technique | | | | |
| US-FNAC | 18 (56.2%) | 13 (68.4%) | 45 (90.0%) | |
| CT-FNAC | 8 (25.0%) | 4 (21.1%) | 2 (4.0%) | |
| US-CNB | 2 (6.2%) | 0 (0.0%) | 0 (0.0%) | |
| CT-CNB | 4 (12.5%) | 2 (10.5%) | 3 (6.0%) | |
| Tissue location of IGB | | | | |
| Lymph nodes | 15 (46.9%) | 11 (57.9%) | 29 (58.0%) | |
| Subcutaneous | 6 (18.8%) | 2 (10.5%) | 14 (28.0%) | |
| Lung | 7 (21.9%) | 2 (10.5%) | 1 (2.0%) | |
| Liver | 2 (6.2%) | 2 (10.5%) | 1 (2.0%) | |
| Bone | 2 (6.2%) | 2 (10.5%) | 2 (4.0%) | |
| Other | 0 (0.0%) | 0 (0.0%) | 3 (6.0%) | |
| Insufficient sample | 0 | 5 (26.3%) | - | |
| Mean tumor burden, mm (SD) | 18.19 (11.18) | 17.56 (11.31) | 19.80 (14.71) | |

Table SIII. Characteristics of false-negative, repeated, and inconclusive image-guided biopsies

Abbreviations: IGB, image-guided biopsy; US-FNAC, ultrasound-guided fine-needle aspiration cytology; US-CNB, ultrasound-guided core-needle biopsy; CT-FNAC, computerized tomography-guided fine-needle aspiration cytology; CT-CNB, computerized tomography-guided core-needle biopsy; SD, standard deviation.
