

Fig. S1. Inhibitory immune checkpoint expression and CD8⁺ host immunity stratified for the presence of Merkel cell polyoma virus (MCPyV) in Merkel cell carcinoma metastases (A-D). P-values are obtained by Mann-Whitney-U-test. $p < 0.05$ was considered statistically significant. ** $p < 0.01$, PD-L1: programmed death-ligand 1, TIGIT: The T cell immunoreceptor with immunoglobulin and immunoreceptor tyrosine-based inhibitory motif
