Figure S1. Global trends for age-standardized rates (per 100,000 population) of alopecia areata from 1990 to 2021. (A and D) age-standardized incidence rate; (B and E) age-standardized prevalence rate; (C and F) age-standardized YLD rate by sex. Abbreviations: YLD, years lived with disability.

Figure S2. Global alopecia areata number and rate (per 100,000 population) of incidence (A), prevalence (B) and YLD (C) by age-specific and sex in 2021. The shaded area represents 95% uncertainty intervals, including overlap between male and female. YLD, years lived with disability.

Figure S3. Global alopecia areata number and rate (per 100,000 population) of incidence (A), prevalence (B) and YLD (C) by age-specific, sex and World bank income in 2021.

The shaded area represents 95% uncertainty intervals, including overlap between male and female. YLD, years lived with disability.

Figure S4. Estimated trends in the global age-standardized alopecia areata incidence (A), prevalence (B) and YLD (C) rate.
