

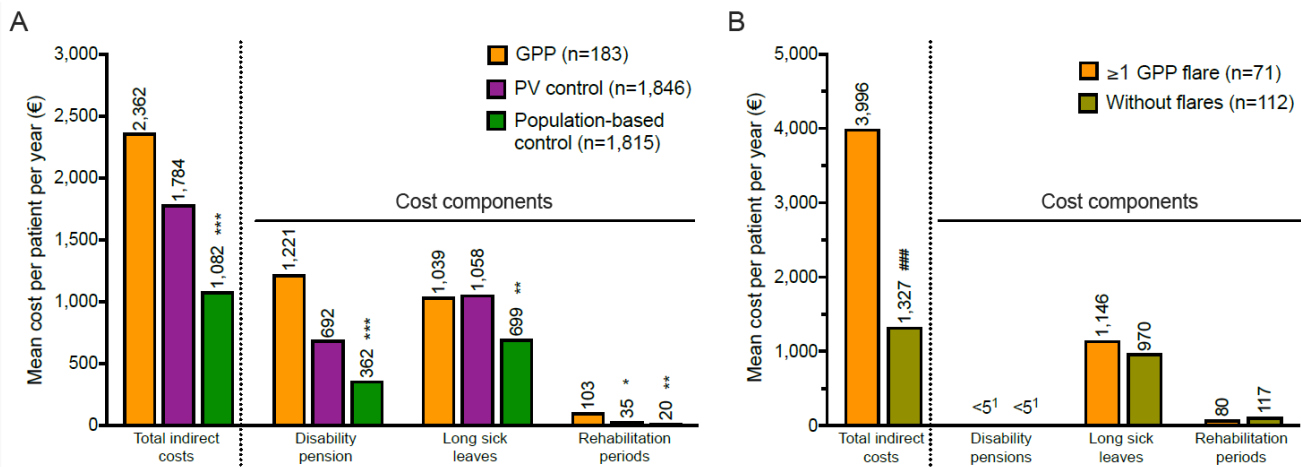

Fig. S1. All-cause indirect costs of generalized pustular psoriasis (GPP) over the different cost components during the follow-up for the working age (<65 years) population. Mean indirect costs for: A) GPP patients and comparison with population-based and psoriasis vulgaris (PV) control groups, and B) GPP patients with and without flares. All costs are per patient per year.

* $p < 0.05$, ** $p < 0.01$, *** $p < 0.001$ between GPP and the population-based/PV control group.

$p < 0.001$ between the groups ‘without GPP flares’ and ‘≥1 GPP flare’.

¹Data cannot be shown due to data masking rules.

Abbreviations: GPP, generalized pustular psoriasis; PV, psoriasis vulgaris.
