

Fig. S1. Outcomes over time to week 52 expressed as LSM change from baseline for each scale. (A) Urticaria Control Test (UCT) (0–16), (B) Urticaria Activity Score over 7 days (UAS7) (0–42), (C) Peak Pruritus Numerical Rating Scale (NRS) (0–10), and (D) Dermatology Life Quality Index (DLQI) (0–30). Values are presented as least-squares means (LSM) with 95% confidence intervals (CI). All timepoint comparisons vs baseline were statistically significant ($p < 0.001$).
