

Table SI. Proliferation response of peripheral blood mononuclear cells (PBMC) in co-culture experiments with PBMCs and rh-IL-6 and/or rh-chymase before and after adding α_1 -proteinase inhibitor (α_1 -PI)

Results are expressed as relative PBMC proliferation response expressed in percentages.

p-values express differences between PBMC responses in incubation mixtures with rh-IL-6 or rh-chymase vs diluent control or rh-chymase and rh-IL-6 vs rh-chymase at the same concentration (*, NS), or in incubation mixtures without α_1 -PI vs the same incubation mixtures with α_1 -PI (\ddagger , NS). p-values were determined using the Mixed model analysis.

*, \ddagger : $p < 0.001$.

^apatients with atopic dermatitis.

^bpatients with mucosal atopic symptoms.

ND: not done; NS: not significant.
