

Fig. S1. "Slit tape-strap" procedure combined with other treatments. (A, B) "Slit tape-strap" procedure used as the anchor tape for Nishioka's procedure to draw the wet granulation tissue away from the ingrowing toenail. (C) With gutter treatment to prevent direct contact between the granulation tissue and the ingrowing toenail. (D) With an elastic wire device to correct the deformed toenail. (E) With a VHO-Osthold brace for toenail deformity from the base to the middle part of the nail. (F) With a shape-memory alloy device and Nishioka's procedure. (G, H, I) After cutting the edge of a pincer toenail in conjunction with Nishioka's procedure.
