

Table SI. Characteristics of patients with cutaneous and oral mucosal lesions of sarcoidosis

Patient	Sex/age, years	Cutaneous lesions	Oral lesions	Systemic compromise
1	M/50	Papules and nodules on the nose	Circumscribed tongue de-papillations overlying pea-sized palpable nodules	Mediastinal adenomegaly
2 (Fig. 1 A, B)	M/35	Exuberant nodules on the face, osteitis of the fingers	Exuberant nodules on the hard and soft palate.	Mediastinal and cervical adenomegaly, osteolytic lesions of the phalanges
3	F/60	Confluent nodules on the nose	Confluent nodules on the lips and tip of the tongue	Mediastinal adenomegaly, pulmonary parenchymal lesions
4 (Fig. 1 G, H)	F/48	Linearly arranged papules	Linearly arranged papules on the lip	Mediastinal adenomegaly
5 (Fig. 1 I, J)	F/33	Infiltrated plaques with central atrophy near the medialcanthus	Infiltrated plaques with central atrophy on the retromolar area and left upper gingiva	Mediastinal adenomegaly, pulmonary micronodules, pleural thickenings
