	+	1 (8)	1 (8)	1 (14)	3
					<i>P</i> =1.0

Table SI. Programmed death-1 (PD1) expression, programmed cell death-ligand 1 (PD-L1) expression, and T-cell receptor (TCR) gene rearrangement in skin biopsy specimens of patients with hypopigmented mycosis fungoides.

There was no significant difference between the three morphological groups in the PD1 expression, PD-L1 expression and TCR gene rearrangement ($P=0.613$, $P=0.885$, and $P=1.0$, respectively).
