

Fig. S2. Cutaneous lymphoma masquerading as acral syndrome. Immunohistochemistry findings. Findings are representative of all biopsy specimens. Cells express CD3 and CD8 (a, c, respectively), while CD4 is negative (b). Cells are also positive for TIA-1 (d), beta F1 (e), granzyme B and negative for TCR gamma stain (f). Streptavidin-biotin-peroxydase; $\times 200$.)
