

Fig. S1. (a) Scattered cells in the mainly lymphocytic infiltrate of a psoriasis plaque show brown nuclear staining for PU.1 (arrows) ($\times 20$). (b) Only 2 lymphocytes (arrows) in allergic contact dermatitis (ACD) show brown nuclear staining for PU.1 (magnification $\times 20$). *Inset*: Numerous cells infiltrating a serial ACD section are labelled for CD3 (arrows) ($\times 40$).
