

Table SI. Cumulative age adjusted prevalences of superficial fungal infections (SFI)

Age group in 2018	SFI cases, <i>n</i>	Total number of participants in age group	Proportion with SFI (%) ~ cumulative prevalence
16–20 years	17	532	3.20
21–25 years	219	3,585	6.11
26–30 years	330	4,040	8.17
31–35 years	312	2,997	10.41
36–40 years	363	2,912	12.47
41–45 years	493	3,495	14.11
46–50 years	489	3,551	13.77
51–55 years	464	3,667	12.65
56–60 years	402	2,949	13.63
61–65 years	293	2,004	14.62
66–70 years	84	602	13.95

With 30,334 participants observed over 23.5 years (1 January 1995 to 30 June 2018), the cumulative incidence rate over 23.5 years was 114 SFI cases per 1,000 persons, equal to an incidence rate of 4.9 SFI cases per 1,000 person-years.
