

Cariology 1983

In the autumn of 1983 Prof. Dr. H. R. Mühlemann will retire as Chairman of the Department of Cariology, Periodontology and Preventive Dentistry at the Dental Institute of the University of Zurich. In view of his outstanding achievements in both dental research and clinical dentistry in the past 30 years, we have decided to commemorate this event and honor this great personality with an international conference entitled 'Cariology 1983'. The conference will take place in Zurich on 2-4 September 1983 under the patronage of the European Research Group for Oral Biology (ERGOB).

Invited top scientists from all over the world will discuss the following main topics: epidemiology, saliva, diet, plaque, fluorides, and prevention and therapy—where from here?

Ample time will be reserved for all participants to engage actively in the discussions. For further information write to Cariology 1983, P.O. Box 7120, CH-8023 Zurich, Switzerland.
