

ACKNOWLEDGEMENTS

Additional to the initial mortality study, the work on this book including its printing has been supported by grants from The Swedish Work Environment Fund (AMFO). Local funding from the Cancer Research Foundation at Umeå Regional Hospital is also acknowledged.

To the work on this book several professionals, not appearing on the author list, have contributed. Thus, we owe much to Professor em Lars-Gunnar Larsson, whose

support has been instrumental, to Ian Layton, who carefully scrutinized the English text and to all members of the department of Epidemiology and Health Care Research, the main research milieu of the work. Special recognition goes to Kjerstin Dahlblom, who skilfully made the illustrations and to Anita Olofsson who not only typed the text in a good and competent spirit but also made us, finally, set full stop.
