Supplementary Table 3. Adjusted odds ratios (OR)\* (age and gender) for not being discussed at a multidisciplinary team meeting (MDTM) in subgroups by calendar year of diagnosis 2008-2013 and 2014-2019, respectively. ORs are calculated with MeDiC points categorised in quartiles and per one unit decrease of the MeDiC score (linear). CI = Confidence interval; n = numbers
