

Table 2: Five year relative survival based on year of diagnosis, gender, anatomical location, and histology.

	Five year relative survival (95% CI)
Male	59% (58%; 61%)
Female	58% (55%; 61%)
Laryngeal cancer UNS	60% (49%; 53%)
Supraglottic cancer	42% (40%; 44%)
Glottic cancer	76% (74%; 78%)
Subglottic cancer	45% (37%; 56%)
Squamous cell carcinoma	60% (59%; 61%)
Adenocarcinoma (salivary gland type)	30% (20%; 48%)
Neuroendocrine tumors	9.4% (30%; 29%)
Others	26% (20%; 36%)
1980-1984	58% (55%; 62%)
1985-1989	59% (56%; 61%)
1990-1994	60% (53%; 59%)
1995-1999	59% (55%; 62%)
2000-2004	58% (55%; 61%)
2005-2009	60% (57%; 63%)
2010-2014	65% (61%; 68%)
